<u>Agenda regarding all the deadlines for the project elaboration (the dates are specified in the "attendance and marks situation" document)</u>

1. Projects assignment.

2. Deadline – Theoretical background:
- the bibliographical study from the literature
- the description of the methods that can be applied
- the description of the possible solutions

You should make and present some few slides (PPT, etc.) to show that this study is accomplished.

3. Deadline – Design:
- the description of the chosen solution which may successfully realize the proposed objectives
- the block diagram
- the description of the implementation flow

You should make and present some few slides (PPT, etc.) referring to these aspects.

4. Deadline – Implementation:
- the description of the functionalities from all implemented modules
- the description of the implemented algorithms
- the description of the application usage
- the implemented application can suffer some minor changes and improvements until the final deadline

You should present the current implementation and keep the implementation description for the final documentation.

5. Deadline – Application presentation:
- the application should be finished
- the application is run in the IDE (environment) where it was implemented and the obtained results are presented
- you should be able to individually answer to some questions related to the application
- the project documentation should be finished
- you will send the documentation in electronic format (by e-mail)
- you will send the realized application (including the source code) in electronic format (by e-mail)
