Personal: ------------------------

Date and place of birth:--------

Computer Science Engineer

Hands on, application oriented researcher in the Computer Vision field focused both on low level image processing and machine learning for the past 10 years, with over 20 published papers. I follow the research beyond the boundaries imposed by the field or by the topic and I am not afraid to go outside the comfort zone to meet my goals.

As a software engineer I always try to find the **balance** between applying the **best practices** and **getting things done**.

I have a strong background in algorithms, and software engineering. I have four year experience in Python, two in MATLAB, 5 years in Java and over 15 years in C. I have working knowledge on distributed and high performance computing.

I am a people person, with strong communication and mentoring skills, always willing to improve myself, to tackle new fields and improve current state-of-the-art.

Skills and expertise

Core skills:

Image processing: feature detection, multi resolution and textural image analysis

Machine learning: SVM, logistic regression, feature selection and performance assessment

Applied fields: medical image processing, scanning electron microscopy, low contrast/noisy images, multispectral imaging

Comfortable coding in Python, Java

Solid knowledge:

Software architecture, design patterns, object oriented programming

Fundamental algorithms and data structures (lists, trees, graphs and operations on them)

Working knowledge:

Deep Learning in 2D images, Geospatial data, Docker, Gearman, RabbitMQ, Linux, C++, Sql, NoSql, RaspberryPi, JavaScript, CUDA

Professional Experience

Software engineer: 2014 – present	Catalysts GmbH Henri Barbusse Str, No. 44-46, Cluj-Napoca(Romania)

With my head in the clouds but with the feets on the ground

Cloud detection from satellite observations is a key step for any accurate meteorological product. The goal of this past project was to improve on existing cloud detection solutions. I developed a machine learning system that processed large, multispectral images. I did system design and coding but also I surveyed the state-of-the-art and wrote the scientific parts of the grant proposal for the project. I code mostly in Python using scikit-learn and Tensorflow based deep learning libraries.

The current project focuses on land classification from multiple, complementary remote imaging sources and over a certain time frame. Besides the machine learning, I am responsible for system design and all the geospatial data handling and processing. The project has a strong startup mindset.

Senior Lecturer	2013 – 2016	Technical University of Cluj-Napoca
Lecturer	2011 – 2013	Computer Science Department
PhD student	2007 – 2011	Memorandumului no 28, Cluj Napoca (Romania)
Independent contractor	2006 – 2007	Tel: +40 264 401 200

Building computer vision algorithms that capture the human expertise

The research area was Computer Vision, focused on algorithms that work on complex and cluttered 2D images [1].

For the PhD thesis I built a framework for medical imaging to perform texture analysis on liver ultrasound images. The goal was to non-invasively diagnose liver pathologies. I proved that the texture analysis

Full list of papers and other details: http://users.utcluj.ro/~visoft

is more sensitive to other factors like liver anatomical particularities [2] and that it captures the performance of the human expert that operates the system [3] and not the actual disease. I developed alternative means of accurately detect the pathologies [4] and replaced the human expert with an automated system [5]. The research was funded by three research grants and a scholarship.

Freelancing and personal projects

Searching for the unicorn, with a taste in hardware

Most of the time I have side projects, mostly for fun or to learn. Sometimes, with my friends we adventure into a startup. With a lean mindset, I constantly improve my failure rate, trying to learn faster (and cheaper) if an idea has market fit or not. Most notable projects:

- Visual fashion search engine. Startup. Deep learning visual search on top of a web crawler.
- Steatosis detection from liver biopsy slides. Research. Deep learning on medical imaging [6]
- Home automation system. Controls heating and monitors various devices. I used Python, RaspberryPi and some hardware modules (1Wire sensors, ADC converters).
- Kaggle: Once in a while I enjoy a challenge. My profile: **kaggle.com/visoft**

Education and training

Formal education:
- **PhD** in Computer Science (2007-2011), **Bachelor** (2002-2007): Technical University of Cluj-Napoca, Computer Science Department, Memorandumului Str no. 28, Cluj Napoca, Romania
- **Doctor-physician** (1997-2003): "Iuliu Haţieganu" University of Medicine and Pharmacy Victor Babeş Street, no. 8, 400012 Cluj Napoca (Romania)

Informal education:
- Design of Computer Programs: Udacity, Peter Norvig
- Functional Programming Principles in Scala: Coursera, Martin Odersky
- Pattern-Oriented Software Architectures for Concurrent and Networked Software: Coursera, Douglas. C. Schmidt
- Introduction to Parallel Programming: Udacity, David Luebke, John Owens, Mike Roberts et al.
- Heterogeneous Parallel Programming: Coursera, Wen-mei W. Hwu
- Introduction to Artificial Intelligence: Udacity, Sebastian Thrun and Peter Norvig
- Machine Learning: Coursera, Andrew Ng

Other

- Languages: Romanian (Native), English (certified C1/B2 by LCCI)
- Reviewer at IEEE-T Intelligent Transportation Systems, Medical & Biological Engineering & Computing, IEEE International Conference on Intelligent Computer Communication and Processing
- Three year BD scholarship from the Romanian National Council of Scientific Research
- Professional visit to Catholic University of Leuven, Belgium, Medical Imaging Research Center
- Small contributions to the world: **github.com/cristi-zz ml-visoft.blogspot.ro**
- Hobbies: Skiing, SF literature, cryptocurrencies, astronomy.

Failures

Failures that hurt, failures that shaped my path. Because it is never easy!

School period

- Finished 7 years of training as a physician but failed to thrive as a physician. Luckily I somehow anticipated that and stated to prep for engineering career.
- Failed to be admitted in 2001 [admitted in 2002] at Technical University Cluj Napoca, Romania
- Failed to raise above the ½ of the leaderboard at ACM International Collegiate Programming Contests. (participated in 2003 and 2004)

Computer Vision Researcher at TUCN

Medical image processing:
- Failed to make fractals understand the medical ultrasound image.
- Failed to detect a disease from images only.
- My papers got rejected from many journals, sometimes with only one sentence at the review.
- As a team, failed to find/win a grant program that would allow our team to continue in medical image processing field. Switched to another ongoing project, electronic microscopy.

Fundamental research:
- I spent 2 years doing more fundamental research. Although I published in a highly ranked journal I pushed the domain only for a small bit and gained very little attention (few citations).
- The above results in image processing were rendered obsolete by the new and shiny Deep Learning approaches.

Software Engineer at Catalysts GmbH

- Failed to elaborate and train a purely analytical model to detect clouds. Backtracked to what others do, to get a decent level of performance.
- Failed to find the right balance between clean code and rapid domain exploration and so I failed to explore more approaches to the cloud detection problem.

Freelancing, startups and other extra

- Startup: Deep learning fashion aggregator. We had clients, and some revenue. Unfortunately the revenue source was better SEO and not the core business value, aggregating the online boutiques and providing a visual search engine. We decided to pull the plug after ~1.5 years.
- Startup: Quality control in clinical laboratory. Worked one summer for a solution that had afterwards zero users. The system was too complex for current, day to day needs.
- Startup: Patient management for dentistry office. No clients, even the team members didn't use it.
- NOAA Right Whale Recognition, Kaggle competition. I tried "old school" image processing but I didn't raise above 200'th place. Since then I focused more on deep learning hype.
- Failed to get a nice score to online class Introduction to Artificial Intelligence, Udacity
- Failed to get a C1 at spoken English. Still failing to upgrade my English skills.

Other job applications (that mattered)

- Google, 2012, 2013. Rejected after on-site interviews (twice!)
- Carl Zeiss, 2014. No interview, rejection letter
- Google, 2015, Postponed the reply to a new interview invitation
