

# **MICROPROCESOARE I**

---

## **Obiectivele cursului :**

- **Familiarizarea cu arhitectura software Intel 8086 ...**
- **Asimilarea setului de instructiuni de baza (8086) + x86 (MMX)**
- **Dezvoltarea de aplicatii in Limbaj Asamblare (LA)**
- **Utilizarea µP 8086 in microsisteme**
- **Pentium**

## BIBLIOGRAFIE RECOMANDATA

**Slide-uri cursuri MP1:** <http://users.utcluj.ro/~elupu/Curs/index.php>

## **NOTARE:**

- **70 % examen scris (teorie+probleme)**
- **30 % teste laborator (4-5)                          Media ≥ 5**

**OBS: Intrare la examen: maxim 2 absente Nemotivate la laborator!!**

**BONUS:- Prezenta la curs > 50 % permite rotunjirea notei finale in sus intre 0.5 ....1 punct**

**Exemplu : Media = 8.66                          Prezenta la curs 3/12**

**Nota catalog = 8**

**Moto: “ Merituos este cel ce termina un lucru inceput, nu cel ce il incepe”**

# Curs 1

- INTRODUCERE
- SCURT ISTORIC – Evolutia calculatoarelor si  $\mu$ P
- ARHITECTURI DE PRELUCRARE
- LIMBAJ de ASAMBLARE . COD MASINA.
- Tema

# 1. INTRODUCERE

**Sistem numeric** - O structura de dispozitive asamblate in vederea prelucrarii sau transmiterii informatiei numerice

- Avantajele prelucrarii numerice:

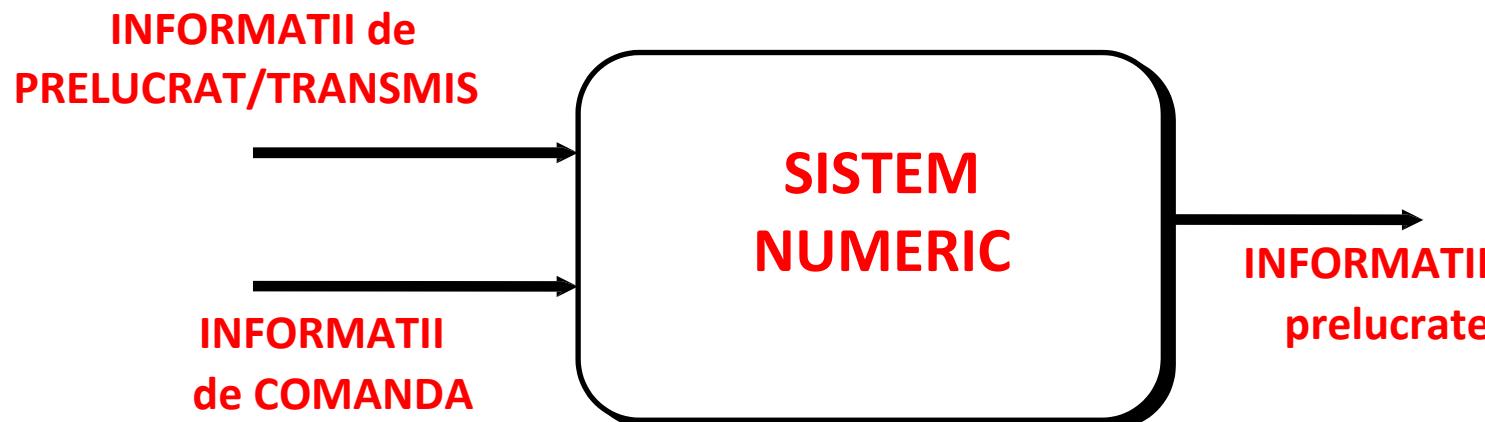

=> **stabilitate si imunitate la perturbatii**

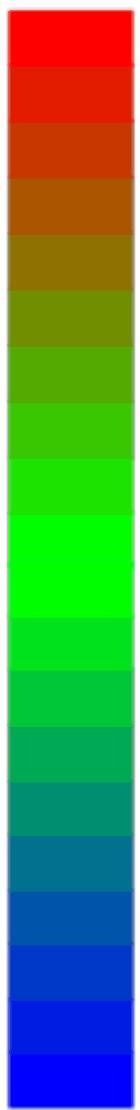

=> **siguranta in functionare chiar la variatii ale parametrilor in timp**

=> **precizie (nu e nevoie de reglaje/compensari ca la circuitele analogice)**

=> **afisare digitala**

- Problemele practice sunt de diverse complexitati si vitezele proceselor urmarite au o gama larga de desfasurare
- **Logica cablata (circuite combinationale-secventiale) / Logica programata**

	You choose	Flexibility
Full Custom	polygons (Intel)	
ASIC	circuit (Sony)	
Gate Array	wires	
FPGA	logic network	
PLD	logic function	
GP Processor	program (e.g., Pentium)	
SP Processor	program (e.g., DSP)	
Multifunction	settings (e.g., Ethernet)	
Fixed-function	part number (e.g., 74LS00)	

## 2. SCURT ISTORIC AL CALCULATOARELOR

- abacul (antichitate)  
calculatoare mecanice – (??-1940)
- sec. XVII – Pascal – masina de calcul mecanica (+, -)
- sec. XVII-XVIII – Leibnitz – (+,-,\* ,/)
- sec XIX - Ch. Babbage (Cambridge) – masina diferențială  
si masina analitica (memorie, unitate de calcul, cititor de cartele si  
perforator de cartele)  
sec. XX
- Howard Aiken (Harvard 1937) – Mark I, II – calculatoare cu seventa  
de comanda automata (Babbage+IBM)  
*(relee + comutatoare) => inceputul noii ere a calculatoarelor*

## Prima generatie ~ 1943-55

*tehnologie:* tuburi electronice

**1943-46 – P. Eckert & J. Mauchley (Univ. Pensilvania- Aberdeen)**

– ENIAC – primul calculator electronic (versiunea MARK I)

~ 18000 tuburi, 1500 relee - 30 tone

- conceptele si ideile - John von Neumann – calculatorul cu program memorat

- alte variante: EDVAC, ILLIAC, MANIAC, Wirlwind, UNIVAC, IBM 701,

704, 709 – primele calculatoare comerciale

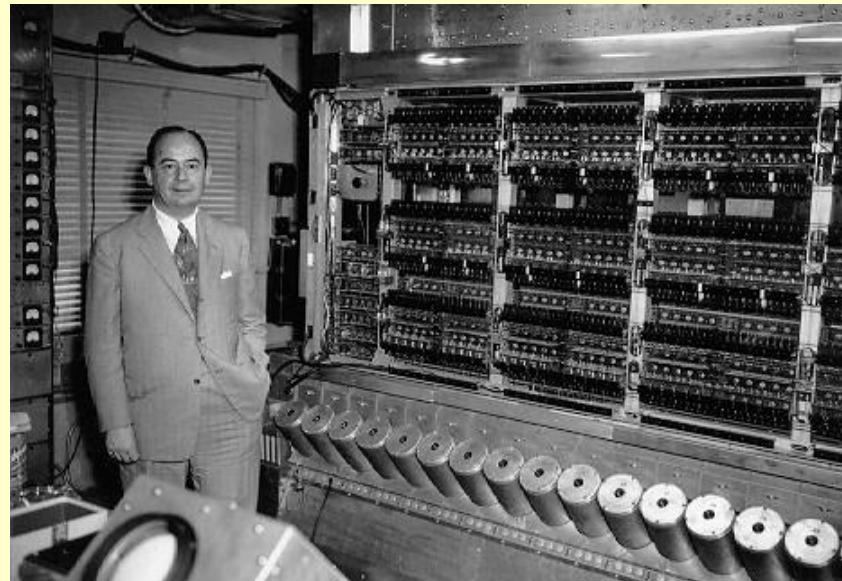

DACICC, CIFA, MECIPT – variante romanesti

**Eckart si Mauchley**

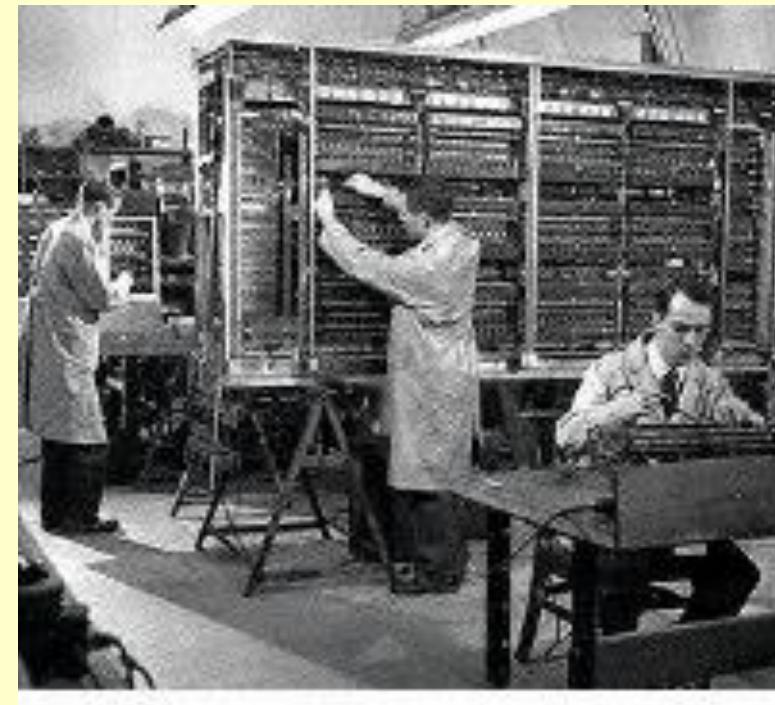

**UNIVAC**

**John von Neumann**

**ENIAC**

**ADVAC**

**IBM 701**

## Generatia a II-a ~ 1955-65

*tehnologia: tranzistorul*

- Shockley, Brattain si Bradley – (Bell labs) - 1 Iulie 1947
- primul calculator tranzistorizat: TX-0
- BM 7090 – varianta tranzistorizata, IBM 1401
- Whirlwind – MIT
- PDP-1, PDP-8, firma DEC
- CDC 6600 – primul calculator paralel
- CETA – calc. romanesc

TX-0

PDP-1

## Generatia a III-a ~ 1965-75

*tehnologia:* circuite integrate

Primul CI digital 12 sept. 1958 ? ( Fairchild ?? Texas Instr.)

familii de calculatoare:

mainframe: IBM 360, IBM 370

mini: PDP 11

calculatoare romanesti:

Felix C-256, C-512, C-32

Independent, Coral – copiaza PDP-11

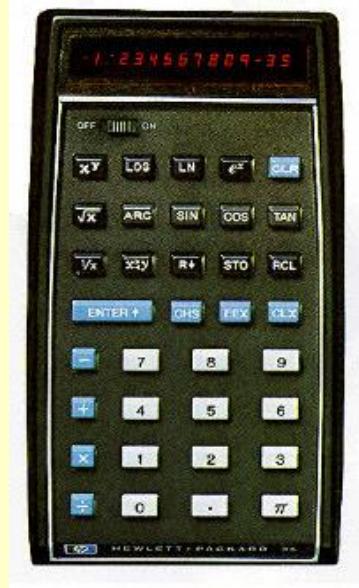

imbunatatiri:

Viteza, fiabilitate, dimensiuni, capacitatea memoriei (256k-512k)

Noi periferice: consola-display (PDP11)

## Calculator HP

HP (1972)

Apollo

## **Generatia a IV-a 1975 -**

**tehnologia: VLSI =>> μP**

- aparitia primului microprocesor - Intel 4004 (1971)
- avantaje: viteza, grad ridicat de integrare, fiabilitate mare, cost redus, dimensiuni mici
- CI ROM, RAM, DRAM de capacitate mare (1-16ko)
- aparitia μcalculatoarelor – pe baza de microprocesor
- apar calculatoare personale:
  - home-computer: ZX81, Spectrum
  - PC: IBM-PC-1981, XT, AT, Apple, Machintosh
  - calculatoare romanesti: seria M18, PRAE, aMIC, Felix PC, Telerom-PC, ECAROM

**Apple I 1976**

[www.old-computers.com](http://www.old-computers.com)

**Sinclair ZX80 1980**

**Atari 400 1979**

**IBM PC 1981**

**Apple Mac 1984**

**Bill Gates**

**Steve Jobs si Steve Wozniak**

## Generatia a V-a ??? (1982-)

-proiect japonez ambitios - esec

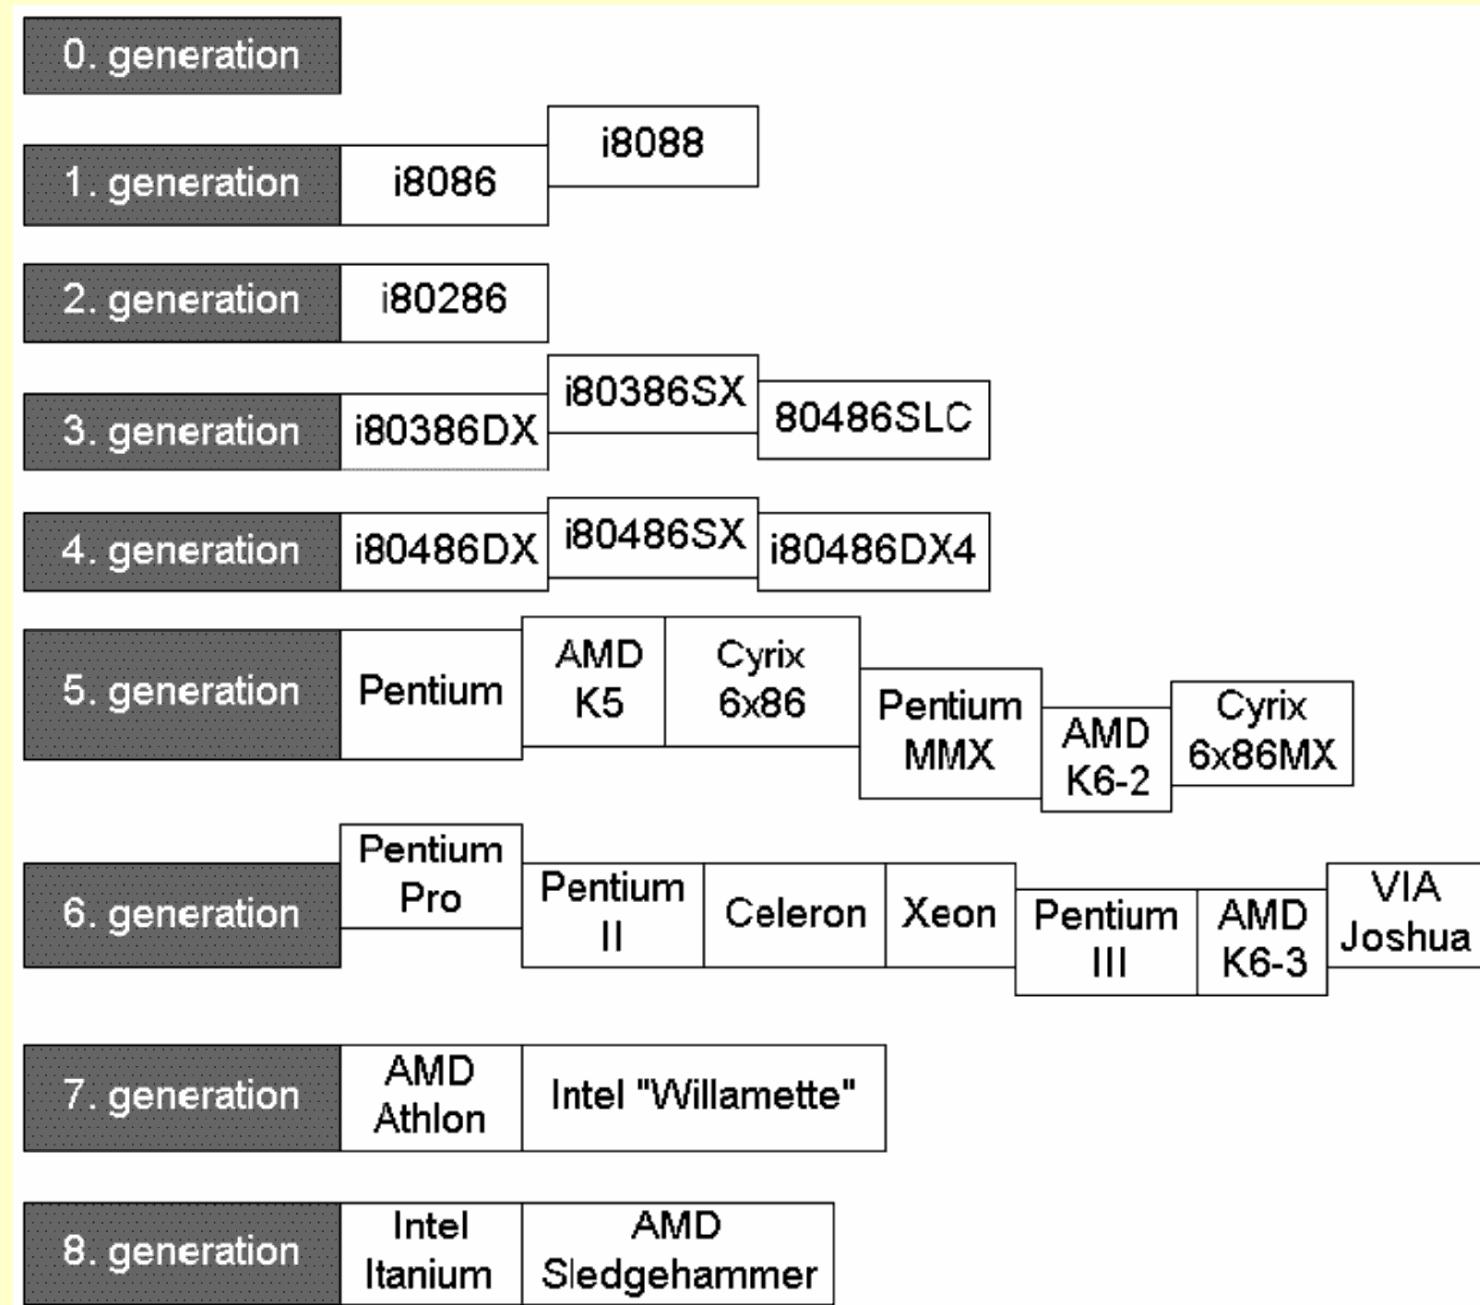

- obiective:
- viteze f.mari de calcul (mil. inferente/s)
  - interfete om-calculator naturale (voce, imagine)
  - aplicatii de inteligenta artificiala
  - arhitecturi paralele de calcul

ce nu s-a prevazut:

- dezvoltarea sistemelor bazate pe microprocesoare
- dezvoltarea retelelor de calculatoare
- dezvoltarea sistemelor / aplicatiilor distribuite (Internet)

-[http://en.wikipedia.org/wiki/Fifth\\_generation\\_computer](http://en.wikipedia.org/wiki/Fifth_generation_computer)

<b>Width</b>	<b>Processor</b>	<b>Application</b>
4 bit	4004	Pocket calculators
8 bit	8080	Small CP/M based home computers
16 bit	8086, 8088, 80286	IBM-compatible PC's running MS-DOS
32 bit	80386 - Pentium 4	32 bit versions of Windows (Windows 95/98/2000/XP)
64 bit	Athlon 64 Pentium 4 Itanium	Server software 64 bits versions of Windows, Linux etc.

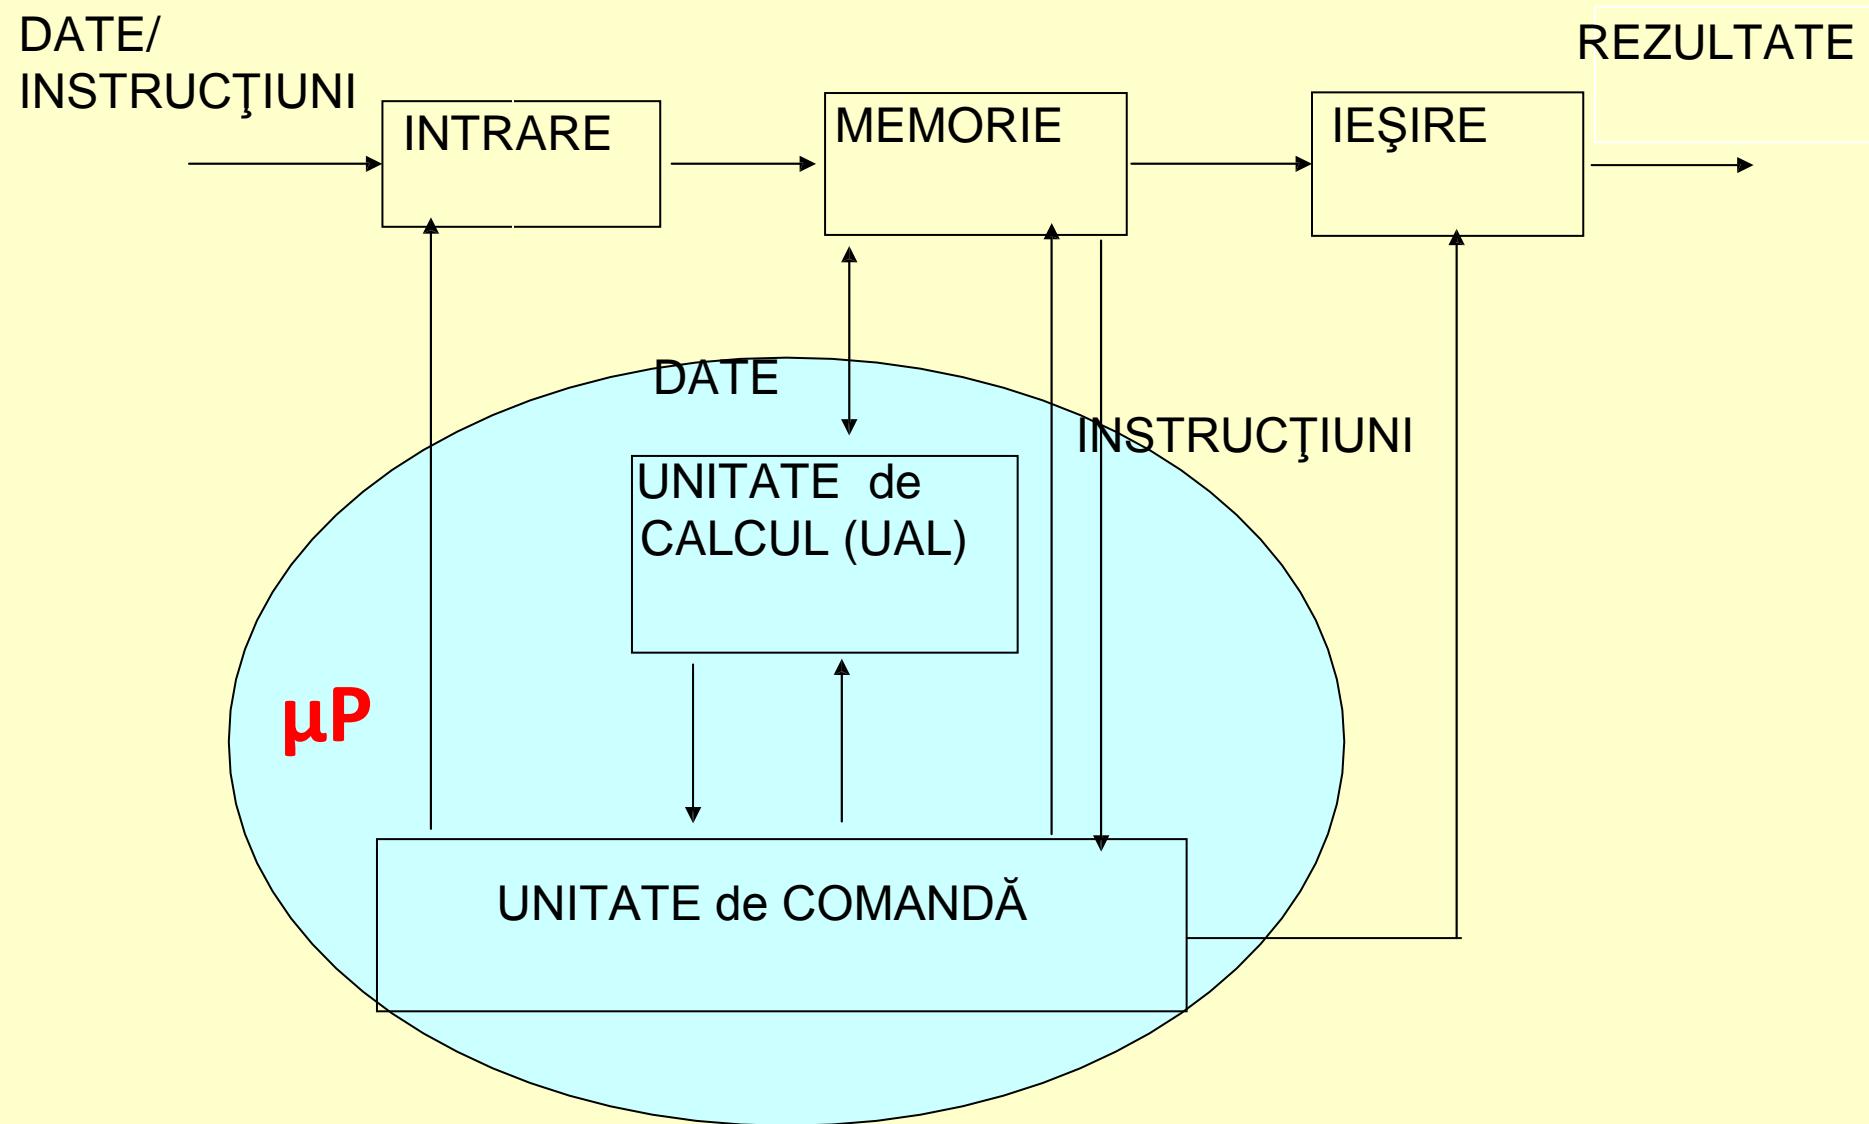

PC	CPUs	Year	Number of transistors
1st. Generation	8086 and 8088	1978-81	29,000
2nd. Generation	80286	1984	134,000
3rd. Generation	80386DX and 80386SX	1987-88	275,000
4th. Generation	80486SX, 80486DX, 80486DX2 and 80486DX4	1990-92	1,200,000
5th. Generation	Pentium Cyrix 6X86 AMD K5 IDT WinChip C6	1993-95 1996 1996 1997	3,100,000 -- -- 3,500,000
Improved 5th. Generation	Pentium MMX IBM/Cyrix 6x86MX IDT WinChip2 3D	1997 1997 1998	4,500,000 6,000,000 6,000,000
6th. Generation	Pentium Pro AMD K6 Pentium II AMD K6-2	1995 1997 1997 1998	5,500,000 8,800,000 7,500,000 9,300,000
Improved 6th. Generation	Mobile Pentium II Mobile Celeron Pentium III AMD K6-3 Pentium III CuMine	1999	27,400,000 18,900,000 9,300,000 ? 28,000,000
7th. Generation	AMD original Athlon AMD Athlon Thunderbird Pentium 4	1999 2000	22,000,000 37,000,000 42,000,000

## GENERATII DE PROCESOARE

## Alte familii de microprocesoare:

- **Motorola:** 6800 (8 biti), 68000 (16 biti), 68020, 68030 (32 biti), 68040
- **Zilog:** Z80, Z8000
- **Texas Instruments:** -Digital Signal Processors:  
TMS320c10/20/30/5x/6x; Digital Signal Controller
- **Microchip:** microcontrolere: PICxxxx
- **Atmel** AT89Sxxxx, AT90SXXXX (AVR)
- **MIPS, ARM etc.**

### 3. ARHITECTURI DE PRELUCRARE

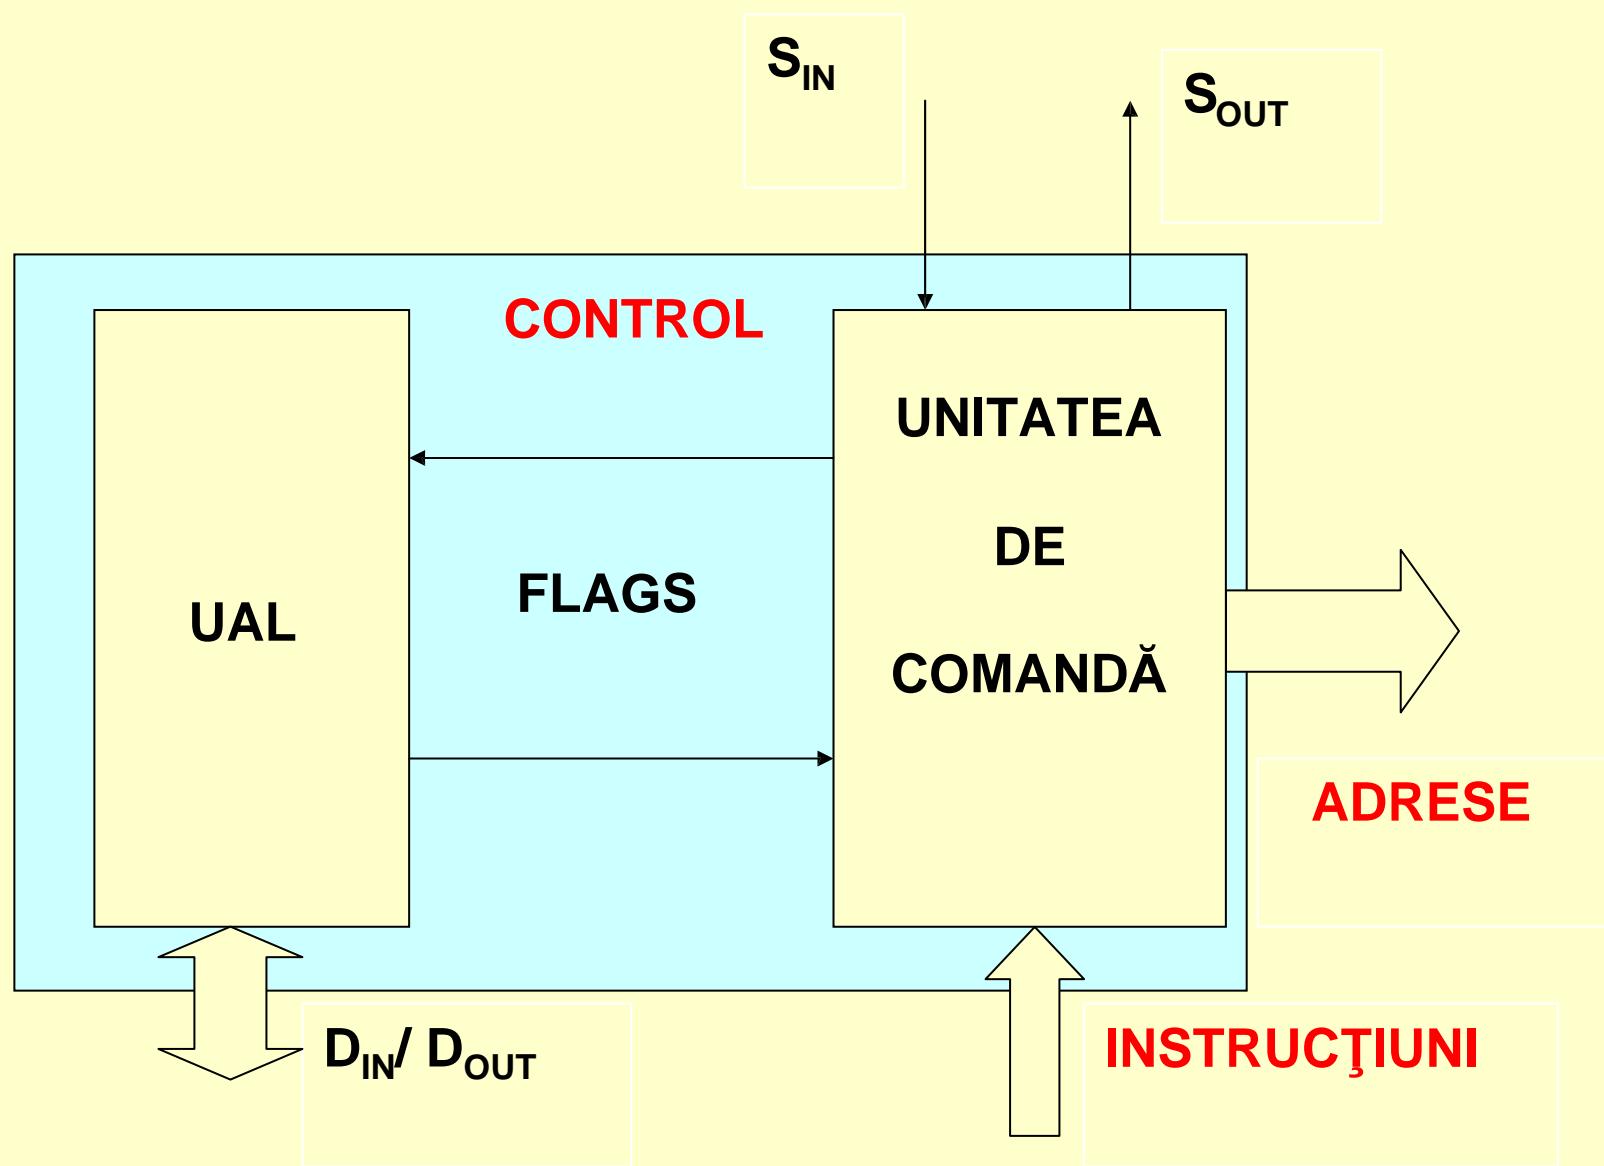

Schema bloc a calculatorului cu program memorat (von Neumann)

Un calculator cu program memorat trebuie să posede :

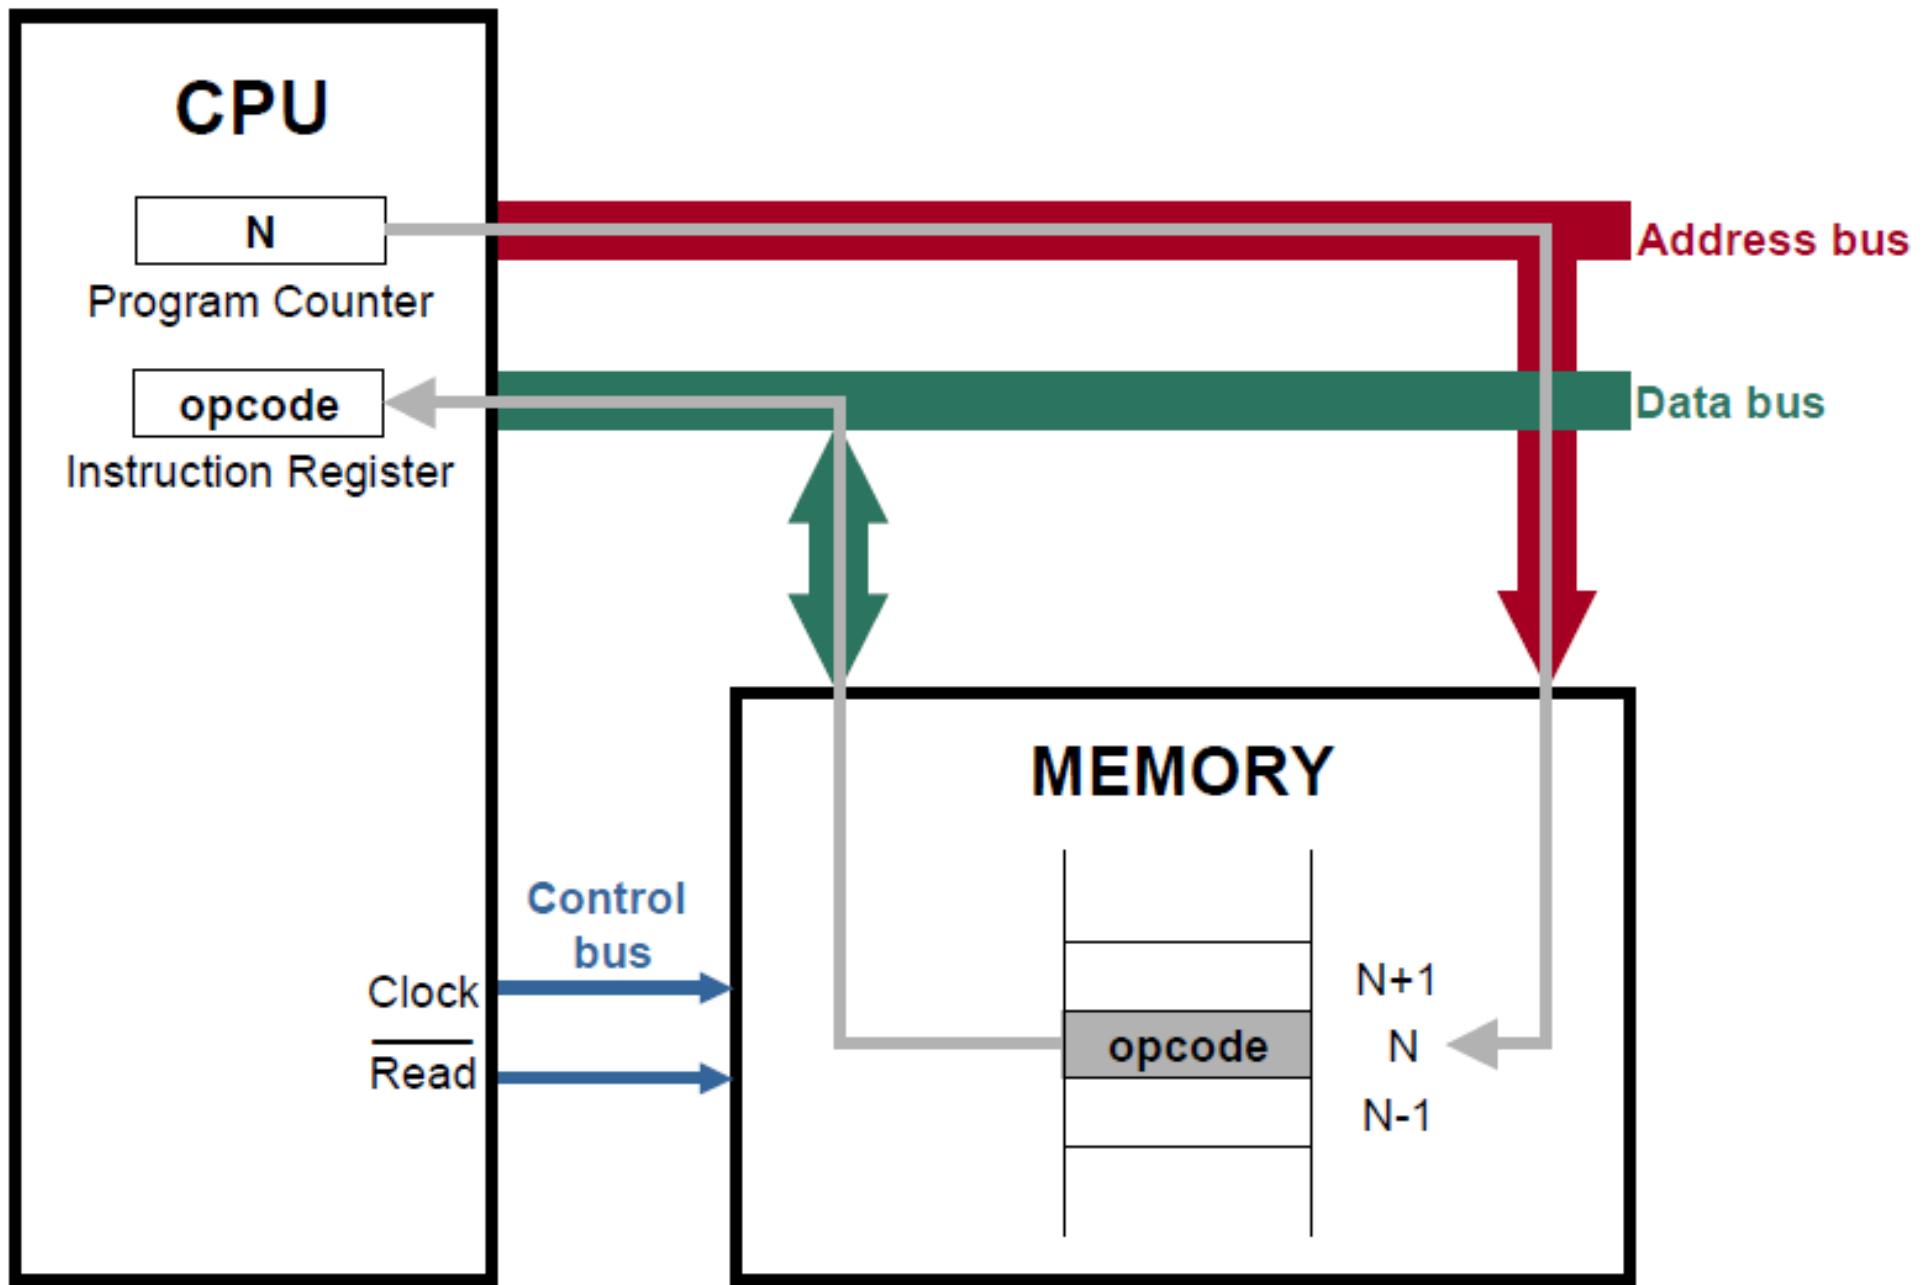

- 1. Intrare** pentru un număr nelimitat de date și instrucțiuni
- 2. Memorie** din care se pot citi instrucțiuni și operanzi și se depun rezultate
- 3. Ieșire** prin care să pună rezultatele la dispoziția utilizatorului
- 4. Unitate de calcul (UAL –unitate aritmetică și logică sau de execuție)** care să execute operații aritmetice și logice asupra datelor din memorie
- 5. Unitate de comandă (control)** care să interpreteze instrucțiunile extrase din memorie și să aleagă diferite acțiuni pe baza rezultatelor calculelor

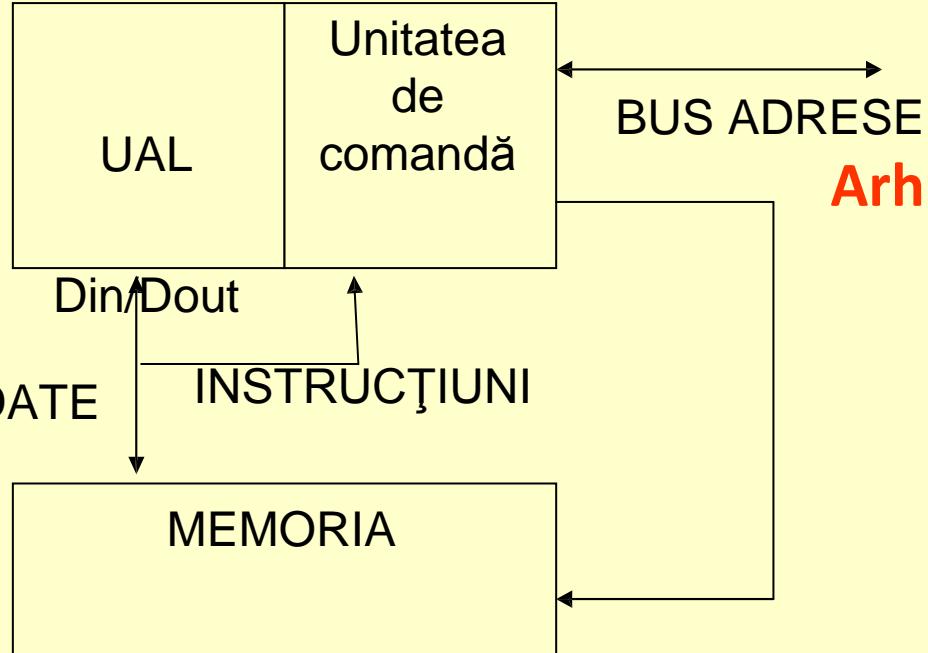

**MICROPROCESOR = Unitate de calcul + Unitate de comandă (4+5)**

**MICROCALCULATOR (single-chip) = 1 +...+ 5 (microcontroler)**

**SCHEMA BLOCA A MICROPROCESORULUI**

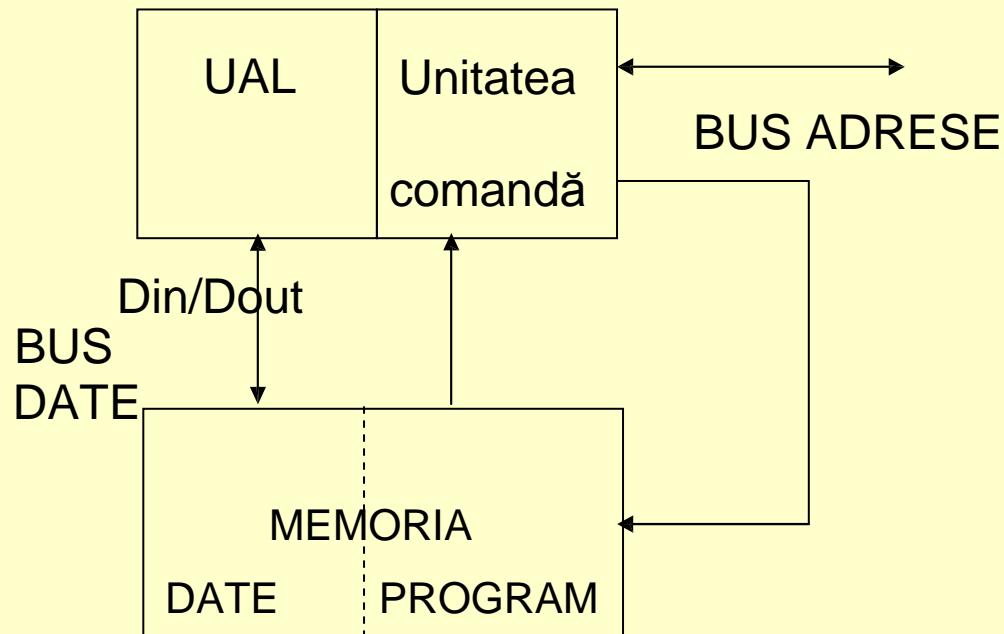

**Arhitectura SISD (von Neumann)**

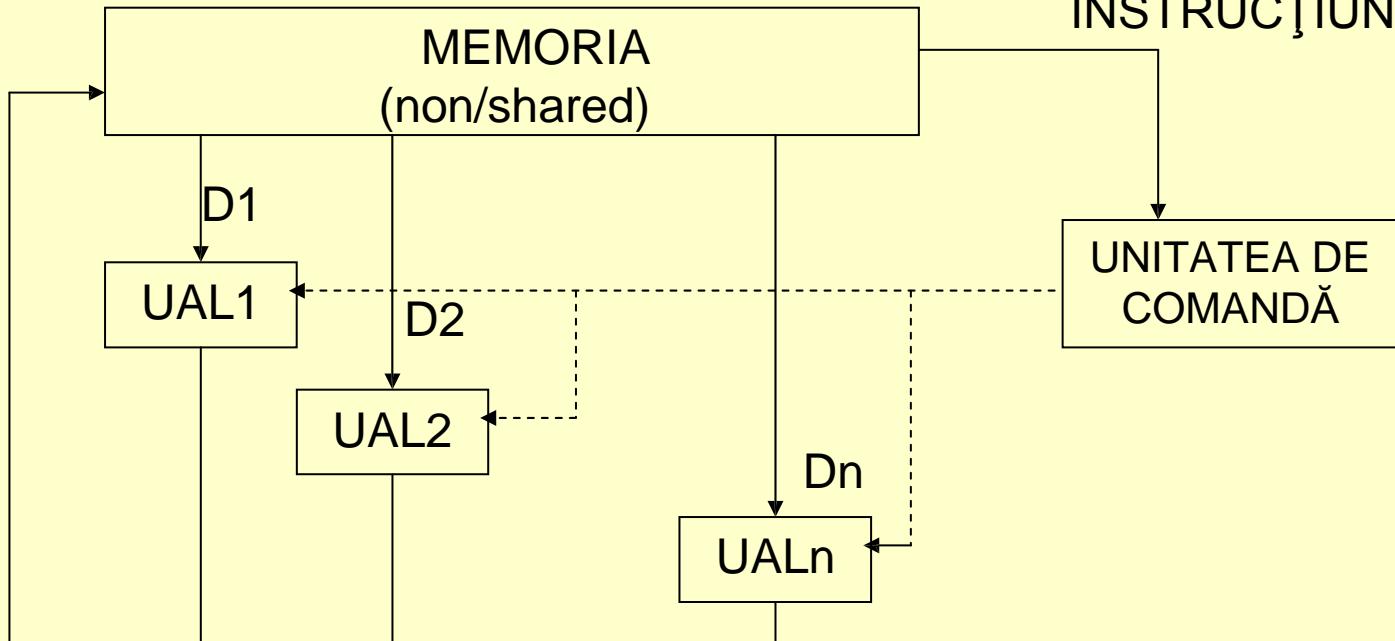

**Arhitectura HARVARD**

**Clasificarea arhitecturilor µP după Flynn**

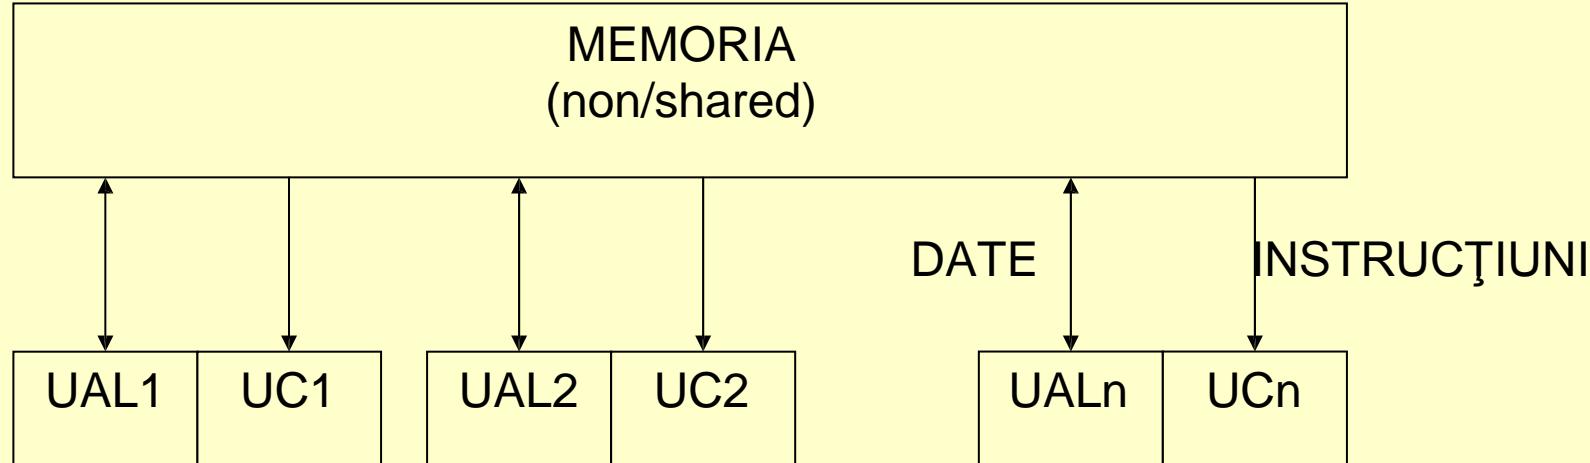

- SISD (von Neumann)
- SIMD
- MISD
- MIMD

**Arhitectura  
SIMD**

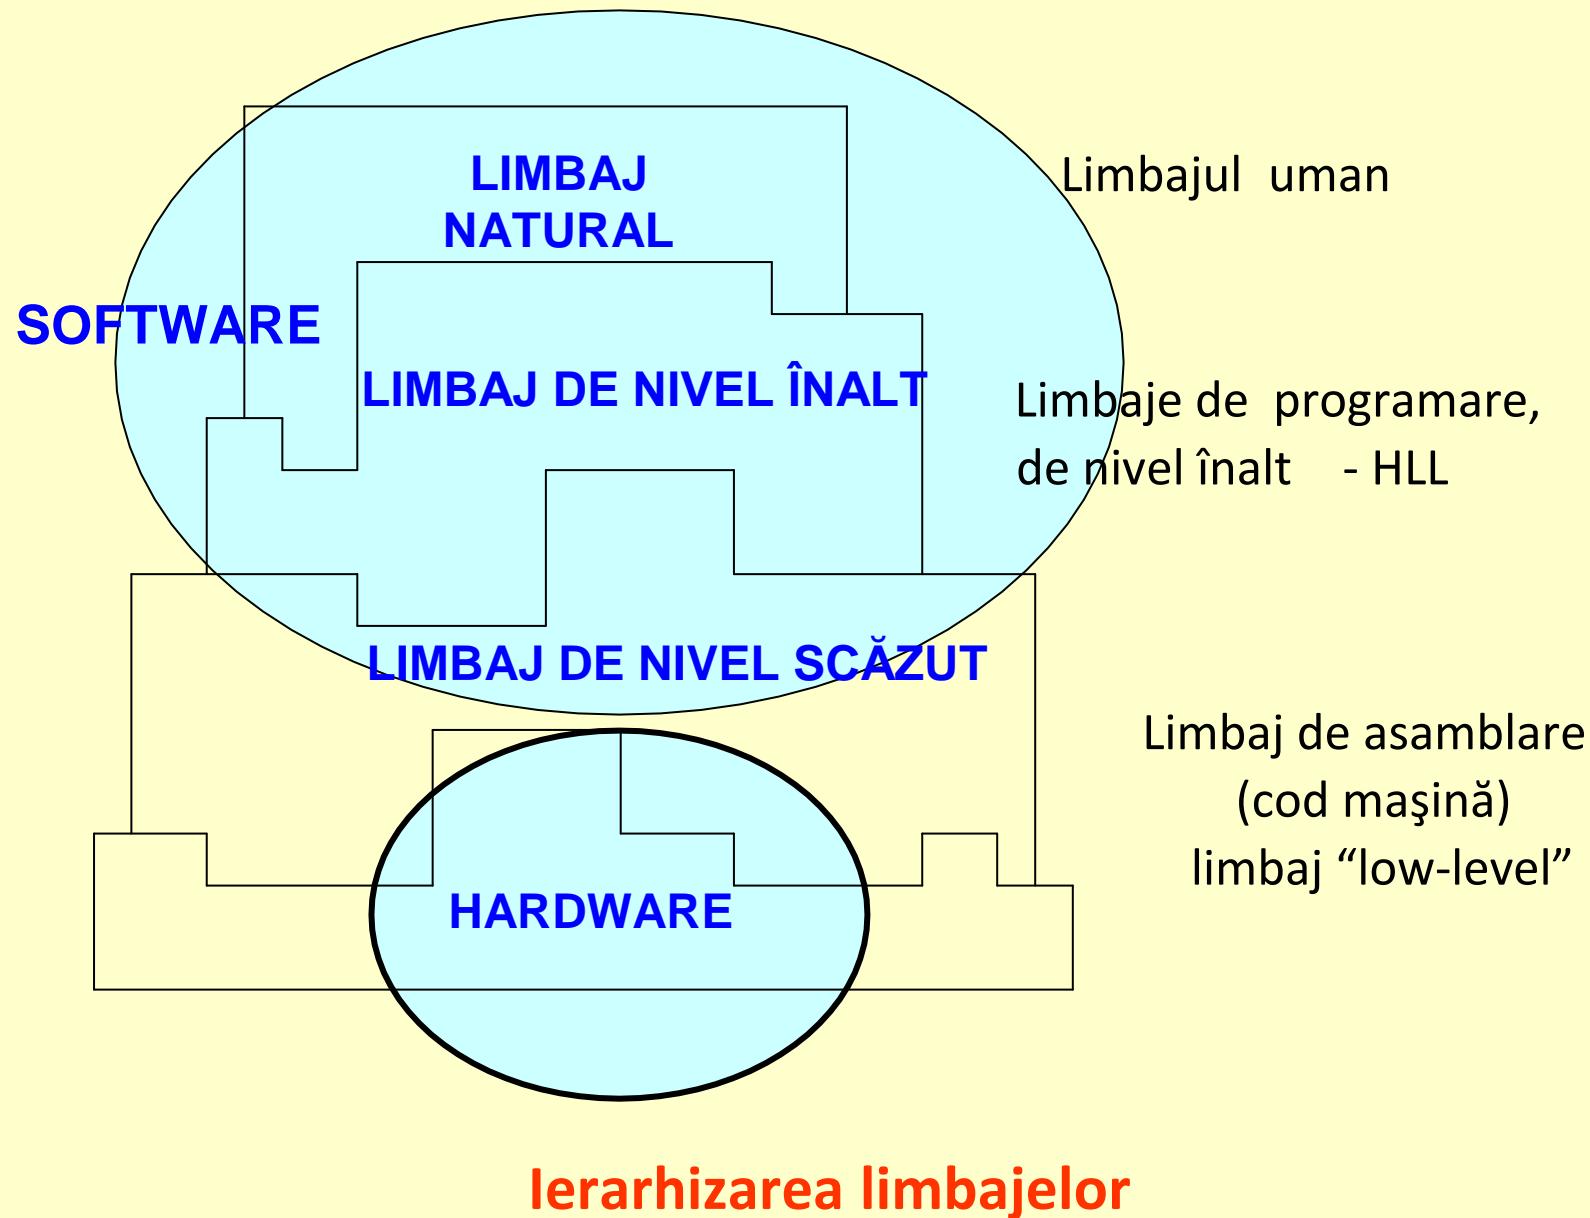

MEMORIA  
(non/shared)

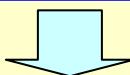

**Arhitectura MIMD**

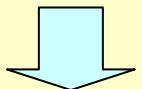

## 4. LIMBAJUL DE ASAMBLARE

Afiseaza suma dintre A \* B si C.

C++: cout << (A \* B + C);

Intel - Limbaj Asamblare

```
MOV    eax,A  
MUL    B  
ADD    eax,C  
CALL   WriteInt
```

Intel - Limbaj Masina

```
A1 00000000  
F7 25 00000004  
03 05 00000008  
E8 00500000
```

## LIMBAJUL DE ASAMBLARE

DEZAVANTAJE	AVANTAJE
<ul style="list-style-type: none"><li>• Assembly is hard to learn</li><li>• Assembly is hard to read and understand</li><li>• Assembly is hard to debug</li><li>• Assembly is hard to maintain</li><li>• Assembly is hard to write</li><li>• Assembly language programming is time consuming</li><li>• Improved compiler technology has eliminated the need for assembly language</li><li>• Today, machines are so fast that we no longer need to use assembly</li><li>• If you need more speed, you should use a better algorithm rather than switch to assembly language.</li><li>• Machines have so much memory today, saving space using assembly is not important.</li><li>• Assembly language is not portable.</li></ul>	<ul style="list-style-type: none"><li>• <b>Speed.</b> Assembly language programs are generally the fastest programs around.</li><li>• <b>Space.</b> Assembly language programs are often the smallest.</li><li>• <b>Capability.</b> You can do things in assembly which are difficult or impossible in HLLs.</li><li>• <b>Knowledge.</b> Your knowledge of assembly language will help you write better programs, even when using HLLs.</li></ul>
